

Guidelines for use

AROMA i7 Essential Oil Diffuser

Overview

Atomizing head

Switch/Bluetooth button

Gear/Bluetooth indicator light

Machine*1

Power plug*1

Power cord*1

Essential Oil*1

Instructions

Step 1

Rotate the atomizing head clockwise and take it out.

Step 2

Pour the essential oil into the atomizing bottle.

Note: When adding essential oils, do not exceed the MAX line of the atomization bottle's capacity.

Step 3

Tighten the atomizing bottle onto the atomizing head.

Step 4

Tighten the atomizing head and start using the diffuser.

Touch Button Control

One-touch button to Turn ON/OFF and control the scent intensity

Touch→Power on / Green Light
[Low: mist 30secs, pause 180secs]

Touch→Blue Light
[Mid: mist 30secs, pause 120secs]

Touch→Red Light
[Mid: mist 30secs, pause 60secs]

Touch→Light off / Turn off

Kindly Note:

Usually, we recommend creating schedules and setting scent intensity in our [AROMA Pro] App to ensure your space is scented to your liking.

Our recommendation is that you create a schedule that matches your lifestyle or business needs so that the diffuser will only run when desired.

Work Time: 10-180secs

Pause Time: 10-180secs

Timer: 00:00-24:00

Schedule: Sunday to Monday

Caution/Maintenance

Safety Instructions

① If you are not a technician, do not attempt to modify, disassemble, or repair the equipment to avoid damage. In case of abnormal operation, first check if the equipment is used according to proper guidelines or refer to the troubleshooting manual. If the issue persists, contact us via email for after-sales support, and we will handle it appropriately.

② When adding essential oils, do not drip them into the device. Do not invert or tilt the device during use. If the device needs to be transported to another location, first perform maintenance and cleaning on it (see Equipment Maintenance for details), place it properly, and then pack and transport it to avoid damage caused by essential oil leakage. Be sure to maintain and clean the device to ensure it remains in optimal working condition.

Maintenance

To ensure optimal diffusion performance of the device, users can inspect and maintain it every six months. Maintenance is also recommended when frequently changing essential oil scents or noticing weakened diffusion effects.

③ First, pour an appropriate amount of alcohol into the atomizing bottle for cleaning and let it dry (alcohol is used here as a cleaning agent to effectively remove residues and dirt inside the atomizing bottle).

④ After cleaning the atomizing bottle, pour a small amount of alcohol into it again. Tighten the assembled atomizing bottle and atomizing head onto the diffuser, then turn on the device and run it for 5-8 minutes (this step allows alcohol to pass through the atomization system, thoroughly cleaning the precise pipes inside the atomizing head).

⑤ After the cleaning run is complete, unscrew the atomizing bottle and atomizing head. At this point, there may still be residual alcohol on them. Place them in a well-ventilated area to allow the alcohol to dry and evaporate naturally. This step is crucial, as residual alcohol may affect the scent and effectiveness of essential oils used subsequently.

Prohibition

Do not lay the machine flat or tilt it.

Do not directly drip essential oils into the spray outlet.

Why isn't the essential oil atomizing?

When adding essential oils each time, note the following tips.

Replacement of Essential Oils

① When adding essential oils, do not exceed the MAX line of the atomization bottle. This can prevent the essential oils in the bottle from being overfilled, which may cause the oils to surge due to air pressure, potentially submerging the atomization hole, producing gurgling sounds, and affecting the atomization effect.

Additionally, before and after adding essential oils, turn off the diffuser and let it stand for at least 5 minutes to allow all the essential oils in the atomizing head to flow back into the atomization bottle before restarting the diffuser.

② Prohibited to pour in other liquid. Do not mix fragrance oils with different ingredients to avoid chemical reactions between components in some inferior oils, which may cause corrosion of the atomization core or block the precise atomization system of the diffuser.

If the equipment is blocked and fails to atomize, please refer to the maintenance methods in [Precautions/Maintenance] of this manual for deep cleaning of the atomization pipeline.

We recommend AROMASOUL fragrance essential oils. Our oils are carefully blended, safe and harmless, specially developed for cold mist diffusers, offering multiple fragrance options at reasonable prices.

①

Is the essential oil atomizing bottle tightened?

Tighten this part!

②

Is the atomizing head tightened?

Tighten this part!

Troubleshooting

1. After powering on, the ambient light at the bottom of the diffuser does not light up, and the device does not work.

① Check if the machine has a low battery

✓ Please connect the power cable to charge

- During charging-green breathing light
- Fully charged-green light stays on
- Touch-Power on /Green Light

2. Power on, the display light is on, but the device no mist/small mist

① Check if it is waterless aroma essential oil

✓ Add essential oils specifically designed for aroma diffusers. Avoid adding water or using essential oils made for humidifiers or spa treatments.

② Check if the bottle, atomizing head, and body of the machine are tightly screwed

✓ The atomization component must be fully tightened; otherwise, the machine will leak air due to incomplete sealing, resulting in the inability to atomize essential oils.

③ Check if it is outside the working hours set by the Bluetooth App. For example, today is Saturday, and the Bluetooth setting is Monday to Friday; or it is now 8 pm, and the Bluetooth App setting is from 6 am to 6 pm.

✓ Create a new schedule and save it.

Using for a Period

② Check if the machine is clogged. Place your finger on the air outlet and check for suction.

✓ Refer to the machine cleaning and maintenance steps, clean the machine regularly.

③ Check if there is more than 5% essential oil in the oil bottle.

✓ Add essential oils specifically designed for aroma diffusers

The fragrance is not strong enough.

✓ Under normal circumstances, our machine can cover an area of 1000-1500 square feet. However, you can enhance the fragrance by following the methods below.

✓ Choose high-concentration waterless essential oil (recommended not to exceed 85%)

✓ Touch the side button or open the App to reset a longer mist/work time.

✓ Place the machine near the air intake of the room, and the natural air flow will carry the subtle dry fragrance throughout the space.

✓ Ensure that there's at least 3 feet of clearance above the diffuser so that nothing is blocking the air from passing over the diffuser and dispersing scent in the room.

Parameters

Product Name

Essential Oil Diffuser

Model

i7

Power

10w

Input

DC 5V --- 2A (Type-C)

Coverage

1500Sq.ft

Battery Capacity

10000mAh

Essential Oil Volume

100ml

Product Size

Φ135*300(mm)

N.Weight

1.8kg
